

اختبار نهاية الفصل لمادة نظام تشغيل Windows 1 ITI310 لفصل خريف 2010

Question 1

What are the minimum NTFS permissions required to allow users to open documents and run programs stored in a shared folder?

Answers

- ☐ List Folder Contents
- ☐ Read & Execute
- ☐ Full Control
- ☐ Modify
- ☐ Write

Question 2

There are two available versions of Windows server 2008 standard edition: 32-bit and 64-bit. They both support up to 4Gb of RAM and 4 processors.

Answers

- ☐ False
- ☐ True

Question 3

Mark connects to a shared folder across the network. He has been granted Change shared folder permission and Read NTFS permission. Which of the following actions can the user perform on a file stored in the folder? Choose all that apply.

Answers

- ☐ Modify the file.
- ☐ View the file attributes.
- ☐ C. Change the file attributes.
- ☐ Read the file

Question 4

You have just been given the IP network address 204.212.15.0, and you need four subnets, each supporting a minimum of twenty-seven PC's.

What is the class of your network? What subnet mask(s) will accomplish the goal ?

Answers

- ☐ Class B, subnet mask 255.255.0.0
- ☐ Class C , subnet mask 255.255.255.192
- ☐ Class A, subnet mask 255.0.0.0

Question 5

In order to use BitLocker, the system should verify the following conditions:

- A minimum of 1.5Gb of available unallocated disk space.
- BIOS supporting clearing of system RAM on reboot.

Answers

- ☐ TRUE
- ☐ FALSE

Question 6

A mandatory profile doesn't save customized or personal changes to the profile when a user logs out, but retains the same profile.

Answers

- ☐ TRUE
- ☐ FALSE

Question 7

You should strive to create only one forest for your organization because using more than one forest requires administrators to maintain multiple schemas, configuration containers, global catalogs, and trusts, and requires users to take complex steps to use the directory.

Answers

- ☐ TRUE
- ☐ FALSE

Question 8

For a first-time installation of Windows Server 2008, it can be done by:

Answers

- ☐ All of them
- ☐ Across the network
- ☐ CD ROM
- ☐ Automated

Question 9

Multiple GPOs can be associated with a single site, domain, or OU.

Answers

- ☐ FALSE
- ☐ TRUE

Question 10

IP address is a combination of two parts. What are these parts?

Answers

Question 11

disk quotas allow administrators to control disk space usage on each disk volume.

Answers

- ☐ FALSE
- ☐ TRUE

Question 12

Group policy is a tool used to implement system configurations that can be deployed from a central location through GPOs (Group Policy Objects). What is the first one applied?

Answers

- ☐ OU
- ☐ Domain
- ☐ Site
- ☐ Local

Question 13

A user informs you that he can log on to his computer but cannot access network resources such as shared folders. You determine that the user has all the appropriate group memberships and permissions, but the user still cannot access shared resources. What may be the cause of this problem?

Answers

- ☐ User has attempted to access a shared folder without appropriate permissions.
- ☐ User has logged on to the domain instead of the local computer.
- ☐ User has logged on to the local computer instead of the domain.
- ☐ User has entered the wrong password.

Question 14

By default, any object in a container inherits permissions from its container.

Answers

- ☐ FALSE
- ☐ TRUE

Question 15

You can create a Domain User Account from Computer Management then Local Users and Groups.

Answers

- ☐ FALSE
- ☐ TRUE

Question 16

Answers

- ☐ Password history
- ☐ Minimum password length
- ☐ Maximum password age
- ☐ Password complexity

Question 17

A group of domain controllers that exist on different IP subnets and are connected via fast and reliable network connection is called:

Answers

- ☐ Site
- ☐ OU
- ☐ Domain
- ☐ Tree

Question 18

The two types of groups in Active Directory are:

Answers

- ☐ Global and Universal
- ☐ Local and Global
- ☐ Security and Distribution
- ☐ Global and Security

Question 19

You are responsible for managing access to server resources for your department.. You configure a shared folder and grant "Read" permission to the Users domain local group and "Full Control" permission to the Administrators domain local group. When you interactively log on to this server as a member of the Users group, you still can create and delete files in this shared folder. Why can you do more than should be allowed with only the Read permission?

Answers

- ☐ The account you used is also a member of the Administrators group.
- ☐ The account you used has been delegated authority to access shared folders.
- ☐ Shared folder permissions are not applied to interactive logons.
- ☐ The server is not a member of the Active Directory domain.

Question 20

Wins server is used to resolve computer names into IP addresses.

Answers

- ☐ TRUE
- ☐ FALSE
